

Geostore API

The Geostore API provides third-party developers and data analysts the capability to integrate with the Geostore by using the Application Programming Interface (API). This document outlines its specifications.

Base URL: <http://openroads-geostore.appspot.com>

List Projects

GET /api/v1/data?type=PROJECT

List Projects

Parameters:

- **n** - A number. If provided, will return the number of projects indicated. Defaults to 50. Maximum of 100. **optional*
- **type** - Required. Must be set to **PROJECT**
- **project_code** - Filter the results by the given Project Code **optional*
- **program** - Filter the results by the given Program. Options are PRDP, GAA, BUB, and TRIP. **optional*
- **has_kml** - Set to 1 to only return results that have a KML Track. **optional*
- **has_image** - Set to 1 to only return results that have an Image. **optional*
- **has_classification** - Set to 1 to only return results that has an Image that was already geoprocessed. **optional*
- **csv** - Set to 1 to return results as a CSV export. **optional*

Example:

<http://openroads-geostore.appspot.com/api/v1/data?type=PROJECT&program=PRDP&n=1>

List Subprojects

GET /api/v1/data?type=SUBPROJECT

List Subprojects

Parameters:

- **n** - A number. If provided, will return the number of Subprojects indicated. Defaults to 50. Maximum of 100. **optional*
- **type** - Required. Must be set to **SUBPROJECT**
- **parent_code** - The Project Code of the parent project.
- **subproject_code** - Filter the results by the given Subproject Code **optional*
- **program** - Filter the results by the given Program. Options are PRDP, GAA, BUB, and TRIP. **optional*
- **csv** - Set to 1 to return results as a CSV export. **optional*

Example:

http://openroads-geostore.appspot.com/api/v1/data?type=SUBPROJECT&parent_code=R007-BOH-LOB-001-2014&n=1

Response body:

List KML

GET /api/v1/data?type=KML

List KMLs

Parameters:

- **n** - A number. If provided, will return the number of KMLs indicated. Defaults to 50. Maximum of 100. **optional*
- **type** - Required. Must be set to **KML**
- **parent_code** - The Dataset Code of the parent dataset.
- **project_code** - Filter the results by the given Project Code **optional*
- **subproject_code** - Filter the results by the given Subproject Code **optional*
- **program** - Filter the results by the given Program. Options are PRDP, GAA, BUB, and TRIP. **optional*
- **csv** - Set to 1 to return results as a CSV export. **optional*

Example:

http://openroads-geostore.appspot.com/api/v1/data?type=IMAGE&parent_code=1591CEF7-C44A-4420-80CF-F4E932D42FEB&n=2

List Classifications

GET /api/v1/data?type=CLASSIFICATION

List Classifications created by Geoprocessing Images.

Parameters:

- **n** - A number. If provided, will return the number of classifications indicated. Defaults to 50. Maximum of 100. **optional*
- **type** - Required. Must be set to **CLASSIFICATION**
- **parent_code** - The Dataset Code of the parent dataset.
- **project_code** - Filter the results by the given Project Code. **optional*
- **image_id** - Filter the results by the given Image ID. **optional*
- **classification_type** - Filter the results by classification type. Set to **SURFACE, QUALITY, or WIDTH**. **optional*
- **classification** - Filter the results by the classification value. Options are **CONCRETE, ASPHALT, GRAVEL, EARTH, GOOD, FAIR, POOR, or BAD**. **optional*
- **image_id** - Filter the results by the given Image ID. **optional*
- **program** - Filter the results by the given Program. Options are **PRDP, GAA, BUB, and TRIP**. **optional*
- **csv** - Set to 1 to return results as a CSV export. **optional*

Example:

http://openroads-geostore.appspot.com/api/v1/data?type=IMAGE&parent_code=1591CEF7-C44A-4420-80CF-F4E932D42FEB&n=2
